

IN THE CLAIMS:

1. (Original). A composition comprising:
 - (a) micro-granules comprising a proton pump inhibitor coated with an enteric coating; and
 - (b) a liquid suspension vehicle having a pH less than 6.0 and having a viscosity sufficient to suspend the micro-granules.
2. (Original). The composition of claim 1 wherein the micro-granules are between 100 μm and 900 μm .
3. (Original). The composition of claim 1 wherein the composition has a viscosity of greater than 500 cP.
4. (Original). The composition of claim 3 wherein the active ingredient is Lansoprazole.
5. (Original). A method of treating a patient with a gastrointestinal disorder comprising providing to the patient a composition comprising micro-granules of an enterically coated proton pump inhibitor and a liquid suspension vehicle having a pH less than 6.0 and a viscosity sufficient to suspend the micro-granules.
6. (Original). A kit comprising:
 - (a) a first container comprising micro-granules comprising a proton pump inhibitor coated with an enteric coating; and
 - (b) a second container comprising a liquid; wherein the first or the second container further comprises an acidic excipient and wherein the first or second container further comprises a thickening agent such that when the contents of the first and second container are combined, the

resulting liquid has a viscosity sufficient to suspend the micro-granules.

7. (Original). The kit of claim 6 wherein the proton pump inhibitor is Lansoprazole.

8. (Original). The kit of claim 7 wherein the viscosity of the liquid is greater than 500 cP.

9. (Original). The kit of claim 6 wherein the micro-granules are between 100 μ m and 900 μ m.
